

Using Video From CNN NewSource in Premiere

1. Download desired video from Newssource.cnn.com **to an external drive** (see the guide to using CNN Newssource for more details.) They will download as MPEG (*.mpeg) files. Use HD 16:9 NTSC files.

NOTE: you can NOT import any video into BJ Lab editors from your desktop, so DO NOT DOWNLOAD video to your desktop, or anywhere on your c:\ drive in the BJ labs!!!

2. You can import the video in Premiere, by clicking on a bin, then choosing FILE>IMPORT, and select the drive location where the file resides (your external drive), and ultimately the file itself, and change the VIDEO box that defaults to C:\, **to your external drive.**
3. Imported files usually import quickly and will appear in the selected Premiere bin.
